# Automation Solutions for Industries with High Documentation Requirements

Whether in contract laboratories or quality control laboratories, laboratory management systems are the tool of choice to keep track of high sample throughput. With the new SOAP interface for the SPECORD PLUS UV/Vis spectrometers, we enable you to seamlessly integrate our devices into your software structure.

**With this interface, you can:**
- Generate methods in your system and use them for measurements
- Start measurements of a sample or sample sequence on the SPECORD PLUS directly from the laboratory management system
- Automatically evaluate results and feed them back into the LMS

**Your benefits:**
- Automated measurements from a system you are familiar with
- Centralized creation of measurements and data evaluation
- Avoiding errors when transferring data from one system to another
- Reduced administrative effort, as user management, program management, and method creation are centralized
- Secure data transfer via encrypted connections and a standardized interface

**We would be happy to present our software solution to you on-site or online.**
